A novel design for a dc-excited cw CO₂ metal waveguide laser
has been developed in which a slotted hollow cathode also
doubles as a metal waveguide for the cavity modes. This design
has been implemented in a compact structure that produces
over 1 W of cw 10.6- μ m radiation. The discharge characteristics,
laser gain, and laser output have been studied as functions of
various discharge parameters.

"Direct Current-Excited CW CO² Metal Waveguide Laser" by ...

Digital Integrated Circuit Design I Electrical and Computer
Engineering 425/525 Portland State University. Fall 2014 This is
the first term of an approved two term undergraduate sequence
and an approved three term graduate sequence.

Digital Integrated Circuit Design I

She is a Senior Instructor in the ECE department at PSU. Mr.
Phillip Wong, Portland State University Phillip Wong received an
M.S. degree in electrical engineering from Carnegie Mellon
University in 1990. Since then, he has been with Portland State
University, Oregon, USA, where he is currently the ECE Lab
Coordinator and an instructor.

One novel approach to improving filter performance is to use so-called reflectionless filters which have recently been proposed. In this paper we demonstrate how to design, simulate and manufacture a reference reflectionless low-pass filter with the corner frequency of 188 MHz. We have found very good agreement between measurements, simulations, and published data, which validates our ...
