Salt concentrations can range from 2% all the way to 10% in some instances. In addition to seasoning the ferment, salt inhibits growth of many microorganisms through osmotic shock, which draws water out of microbial cells via osmosis, effectively killing those microbes. Happily, lactic acid bacteria are salt-tolerant, so they are free to grow.

Try a reverse osmosis filter for a large fish tank. A reverse osmosis filter is an extremely efficient filter that removes up to 99% of contaminants from water while leaving the ions that make fish healthy. Since the contaminants are what raise the water pH, the filter will naturally lower the pH level as it cleans the water.
