Thermostat—This is the mechanism that detects the interior temperature in your home and tells your system when to turn on and off. If it isn't working, your furnace will either run constantly, putting unnecessary wear on the parts, or it won't turn on at all.
Heat exchanger—This creates the heat for your home.

Residential Cooling Showcase 2021 | 2021-04-19 | ACHR News

The unit usually sits outdoors and pumps cold air inside through a series of ducts that culminate at vents either located in the floors or ceiling. Portable or window-mounted air conditioners can be used for cooling a single room where installation of a more complex ductless system is not desirable.
