Steel Structures:Design and Behavior, 5/e strives to present in a logical manner the theoretical background needed for developing and explaining design requirements. Beginning with coverage of background material, including references to pertinent research, the development of specific formulas used in the AISC Specifications is followed by a generous number of design examples explaining in detail the process of selecting minimum weight members to satisfy given conditions.

Steel Structures: Design and Behavior (5th Edition ...

The design of structural steel members has developed over the past century from a simple approach involving a few basic properties of steel and elementary mathematics to a more sophisticated treatment demanding a thorough knowledge of structural and material behavior. The fourth edition of this best-selling work reflects the latest changes occurring in the design requirements for structural steel using the 1993 AISC Load and Resistance Factor Design and the 1989 AISC Allowable Stress Design ...
