Assignment 19 Flashcards | Quizlet

Lesson Overview Human Chromosomes Transmission of Human Traits Many human traits follow a pattern of simple dominance. One trait that displays simple dominance is the Rh blood group. The allele for Rh factor comes in two forms: Rh + and Rh-. Rh + is dominant, so an individual with both alleles (Rh +/Rh-) is said to have Rh positive blood.

Lesson Overview Human Chromosomes

Aerosol transmission can occur in specific settings, particularly in indoor, crowded and inadequately ventilated spaces, where infected person(s) spend long periods of time with others, such as restaurants, choir practices, fitness classes, nightclubs, offices and/or places of worship.

Coronavirus disease (COVID-19): How is it transmitted?

Transmission of Human Traits Codominant and Multiple Alleles The ABO blood group gene codes for different antigens on the surface of a person's red blood cells. There are three alleles for this gene: IA, IB, and i. Depending on a person's alleles, they can have A antigens, B antigens, both, or none. Label the antigens on the red blood cells.
